EXPERIENCE

SnapMatePhoto, Remote - *Software Engineering Intern*

September 2025 - December 2025

Software Engineering Intern at an early-stage startup, collaborating with other developers and a UI/UX designer on a production web platform serving 200+ active users.

- Implemented production-ready frontend features and user-interfaces from Figma designs, collaborating with a UI/UX designer and other developer interns
- Developed and maintained backend API endpoints to support new frontend functionality and improve existing services
- Owned production deployments to AWS EC2 using Linux and Nginx, ensuring reliable updates and site uptime
- Conducted peer code reviews on GitHub, improving code quality, readability, and deployment stability

Heffernan Insurance Brokers, Menlo Park, CA - *Administrative Intern*

January 2018 - June 2019

Assisted with daily office operations and guest reception, managed data entry tasks in Excel and organized hundreds of internal records at a large insurance brokerage.

- Recognized as Employee of the Month for strong performance and teamwork
- Processed and logged incoming mail using internal administrative systems, ensuring timely handling and accurate record updates

PROJECTS

Forked (Mobile Application) - *Creator & Full-Stack Developer*

April 2025 - Present

Mobile application for discovering nearby restaurants and attractions.

- Built a swipe-based mobile application to help users discover nearby restaurants and attractions, supporting both solo and group decision-making
- Integrated the Google Places API to fetch and rank nearby locations in real time based on user location
- Implemented Firebase Authentication and Firestore to support user accounts, session persistence, and saved preferences

Explora - *Creator & Full-Stack Developer*

June 2025 - July 2025

A real-time map system that visualizes Minecraft terrain in the browser by syncing game data across a Java plugin, a REST API, and a modern React frontend.

- Designed a Node.js backend to ingest, cache, and serve real-time terrain and player data from multiple Minecraft worlds with a focus on performance optimization
- Built a React UI with zoomable, pannable live map and WebSockets for a high quality user experience
- Integrated real-time data flow across JVM (Java plugin), a Node.js REST API, and browser environments using WebSockets and API requests

SKILLS

Java	TypeScript	JavaScript	React	MySQL
Git	AWS	Google Cloud	Linux	Docker

EDUCATION & CERTIFICATIONS

California State University, Stanislaus

May 2025

B.S. in Computer Science

React.js Fundamentals & Performance — *RS School (Online)*

October 2025

Covered advanced React topics including hooks, state management, data fetching, Next.js App Router, unit testing, and performance optimization
